

CLIMATE RESILIENCE INCUBATOR

ACCELERATING THE
DEVELOPMENT OF INNOVATIVE
ENTREPRENEURIAL PROJECTS
AIMED AT ADAPTATION AND
RESILIENCE TO CLIMATE CHANGE

1

The Climate Resilience Incubator is a new support program focused on sustainable development and impact. Its aim is to identify entrepreneurial opportunities to address local issues related to climate change, and then facilitate and accelerate the integration of solutions into the community. The ultimate goal is to make the Îles-de-la-Madeleine more ecologically resilient with the contribution of organizations.

In collaboration with multiple stakeholders and partners in Îles-de-la-Madeleine, a process of **mapping sustainable development opportunities** is initially planned. This first step will validate the most promising solutions.

2

A series of interviews will be launched to select the **22 projects** that will be supported under the new sustainable development program. The program will be open to **anyone who wishes to undertake and develop a project**: individuals, organizations, or businesses with an impact project, whether collective (NGOs, cooperatives) or individual. Existing and developing **citizen and community initiatives** are also targeted by this program.

3

Built on the foundation of a support system that combines **collective work sessions and individual coaching** for each project, the incubator will focus on **developing the impact entrepreneurship skills** of project leaders and their partners, but most importantly, on **implementing** these practices in reality. **Networking activities** and **pitch sessions** are also planned as part of the incubator's support program.
